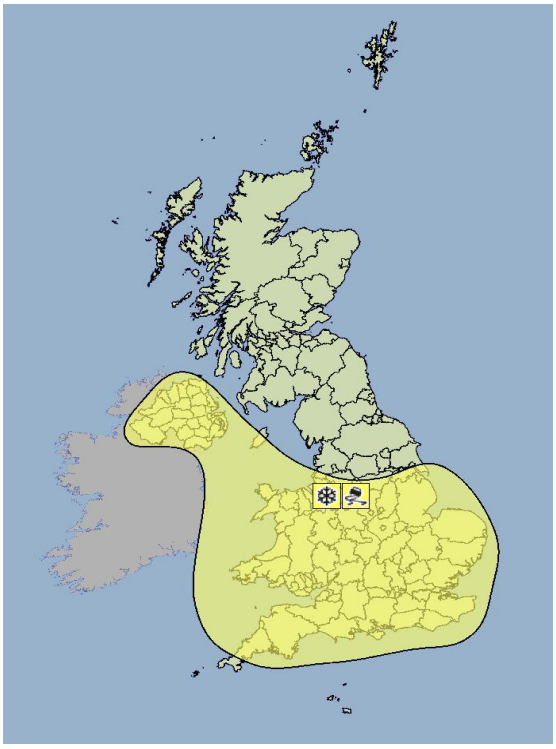
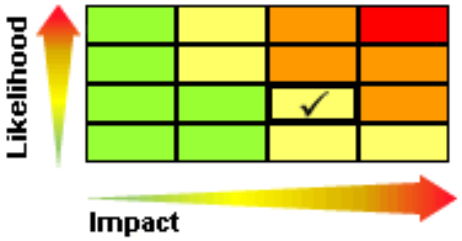
National Severe Weather Warning Service





Chief Forecasters Assessment
Freezing rain will remain a risk until early afternoon, leading to very icy surfaces in places.

Snow amounts will be generally smaller than seen on recent days but a further 2-5 cm is likely in a few locations, most likely this afternoon and evening across Wales, the Midlands and East Anglia. Up to 10 cm is possible in a few spots, especially east Wales.

The Met Office have issued a **Yellow Warning** of **Snow and Ice**

Valid from **10:30 on Fri, 02nd Mar 2018** until **23:55 on Fri, 02nd Mar 2018**

Patchy freezing rain will affect some southern parts of England and well as west Wales until early afternoon, leading to icy stretches which may be difficult to see.

There is also an increasing chance that a further spell of more persistent snow may move north northwards across southern England, Wales and central England during the day, reaching northern England by evening, producing further accumulations. Further snow is also likely over parts of Northern Ireland. In addition, strong winds will lead to further drifting or blowing around of existing snow cover.

Delays and cancellations to public transport are possible, as are delays to travel on roads; some stranding of vehicles and passengers could also occur. Some rural communities could become, or remain cut off. Interruptions to power supplies and mobile phone coverage are also possible.
